

Startup Partner Program

Built for high-growth ETO manufacturers ready
to manage margin from day one.

Is this you?

You're winning customers and scaling fast.
The infrastructure needs to keep up.

\$5M–\$40M revenue, growing year-over-year

Series A or beyond, institutionally funded

Engineer-to-Order or complex configure-to-order

Winning enterprise contracts, quoting & forecasting still in spreadsheets

No entrenched ERP/CPQ quoting module in place

The Cost of Getting It Wrong

Programs get awarded at target margins, then silently erode — with no alert.

01 Invisible Margin Erosion

One customer had 40 parts silently below margin for over a year before they found out. The earlier you have visibility, the more you can act on it.

02 Quoting Takes Weeks

Multiple spreadsheets, no version control, no single source of truth. By the time you respond, the customer has moved on.

03 Tariff & Cost Shock is a Black Box

When a 25% tariff hits your materials, nobody knows total exposure fast enough to build a recovery case on the spot.

Saphran's fix for each of these is precise, not complex.

Purpose-built for manufacturing.
Not a generic BI tool adapted
to your industry.

01

Invisible Margin Erosion → Continuous Margin Walk

Every cost change tracked by date, automatically. See when and why margin moved, before it's a crisis.

02

Quoting Weeks → Days

Collaborative costing with BOM, routing, cost inflation & approvals in one place. 3-week quotes become 3-day quotes.

03

Tariff Black Box → 3-Second Scenario Modeling

Apply a tariff or cost spike, see margin impact across your entire portfolio instantly. Build the recovery case on the spot.

Where Saphran Can Deliver Financial Impact Today

High-growth ETO manufacturer
\$10M–\$40M revenue:

- Scaling fast, winning enterprise programs
- Quoting in spreadsheets
- Facing material cost volatility
- No real-time margin visibility

**based on industry benchmarks*

Margin Visibility

Earlier detection of margin erosion

→ ~\$200K–\$400K potential annual savings

Forecast Accuracy

Reduced freight and excess inventory

→ ~\$100K–\$200K potential savings

Eng. Change Recovery

Improved cost recovery on design changes

→ ~\$75K–\$150K impact

Faster Scenario Response

Faster response to cost & volume shocks

→ ~\$75K–\$150K impact

TOTAL POTENTIAL ANNUAL IMPACT

~\$450K – \$900K

The Longer You Wait, the More It Costs

Most manufacturers don't address commercial visibility until after a painful event.

Getting in early — before the first bad contract — is the entire point of this program.

Your Partner Program Pricing

HOW PRICING SCALES AS YOU GROW

Pricing steps when you hit each revenue milestone.

What You Get

Full Platform Access from Day One

PartBase, QuoteBase, ConnectBase, SaphranAI, no feature-gating. The same platform used by \$500M+ manufacturers, available to you at startup pricing.

Startup Pricing — ~40% Off Standard Rate

Start at \$40–45K ARR vs. the standard \$75K floor. Designed to match where you are today, not where you'll be in two years.

Milestone-Based Scale — No Surprises

Pricing steps up automatically as you hit revenue milestones. Transparent, pre-agreed, and aligned with your growth.

2-Year Partnership Term

Enough stability to prove ROI and build on. Long enough to matter, structured to keep both sides accountable.

Eligibility Criteria

We keep this focused so it delivers real value to the right partners.

Funding Stage

Series A or beyond — minimum \$5M raised

Revenue Range

\$5M – \$40M annual revenue

Business Model

Engineer-to-Order or complex configure-to-order manufacturer

Current Stack

Spreadsheets or lightweight point tools — no entrenched ERP quoting module

Growth Trajectory

Headcount or revenue expanding year-over-year

Let's get started.
